I do find the value proposition strong	How to deal with privacy issues(accessing contacts in address books wont it contravene privacy laws?)
+	Δ
The concept and its execution is clear but I wonder whether the form that is envisaged in theory may end up working in the real world. In other words, have any efforts been made towards customer validation?	How to start and stay the course? How difficult will it be for potential competitors to copy the idea that the team has developed painstakingly and enjoy the fruits even before the start up breaks even?
